He promises to use it in the cross country service next year. The machine, he says, will be made like an ordinary aeroplane for carrying six persons. If more want to travel the lower plane will be added. If a double load is to be carried a lower plane nearly as large as the original one will be added, thereby making it a biplane. Fokker says that the arrangement is just as simple as hitching on more coaches to a railway train.

**BRITISH TEACHING CROWDED**

Too Many Professors, Classes Too Large, Union Says.

LONDON, Oct. 21 (Associated Press).—The teaching profession in England, unlike that in America, is becoming drastically overcrowded, according to estimates just published showing several thousand teachers to be without employment. Commenting on the situation, Sir James Yoxall, general secretary of the National Union of Teachers, declared: "This is the inevitable result of the so-called economy recommendations of the Geddes committee. These included larger classes and fewer teachers. The result is that the profession is badly overcrowded, and several thousand are unemployed. This development is a big waste of public money. Many teachers were induced by bursaries—paid for out of the public funds—to leave the secondary for the primary schools. Now all that money is wasted, for the teachers are out of work."
